Azithromycin is derived from the natural product of the bacterium *Spiranthes*. Zithromax is a brand name for azithromycin. If you do not take Zithromax, you may experience side effects such as dizziness, headache, and nausea. The description of Zithromax ingredients includes colloidal silicon dioxide, which is used as a filler. The center of the Zithromax tablet contains the active ingredient, azithromycin, and the outer coating consists of a mixture of hydroxypropyl methylcellulose and hydroxypropyl methylcellulose. Zithromax is used to treat a variety of bacterial infections, including sinusitis, pneumonia, and pharyngitis. It is also used to treat certain types of sexually transmitted infections (STIs), such as chlamydia and gonorrhea. Zithromax is a macrolide antibiotic, which means it works by blocking the growth of bacteria. It is usually taken once a day for a period of 5 to 7 days. The severity of the infection and the patient's overall health will determine the dosage. For example, a patient with a mild sinus infection may be prescribed a 500 mg dose, while a patient with a more severe infection may be prescribed a 1000 mg dose. Zithromax is also used to treat certain types of eye infections, such as conjunctivitis. It is usually administered as eye drops. Zithromax is a prescription drug, and it should be used only as directed by a healthcare provider. It is important to take Zithromax exactly as prescribed, and to avoid taking it with alcohol or other medications that may interact with it. If you experience any side effects while taking Zithromax, such as dizziness, headache, or nausea, you should contact your healthcare provider immediately. Zithromax is a powerful antibiotic, and it is important to use it responsibly to avoid the development of antibiotic resistance.
